Training Instructions for Users

Understanding the steps in your training
Steps = how many times the AI studies your photos

- **2000 steps** = better quality (3–4 min, about $2–3) – for higher accuracy

- **4000 steps** = maximum quality (6–8 min, about $4–6) – best possible results

Each image generation after training: $0.01–0.02 per image

Tips for the best results

- Start with 2000 steps for your first training

- Use recent photos that show you as you look now

- Provide variety: different clothing, backgrounds, lighting conditions

- If the results aren't perfect, retrain with more steps

Your trigger word
The trigger word **"ohwx"** is your personal identifier.
During training, the AI learned that "ohwx" refers to you.
Always include *"ohwx person"* in your prompts to generate images of yourself.
Without this word, the AI will create random people instead of you.
