## Your First Prompt: Be Comprehensive

The quality of your initial prompt determines how much back-and-forth you'll need. Include everything Antigravity needs to know upfront.

The easiest way is to download your n8n workflow and upload it into Claude. Then use this prompt:

### **Prompt:**

*I want to build a web app frontend for my n8n workflow using the ai coding tool Google Antigravity. For that, I need you to generate a prompt that ask this ai coding tool to tell me if and how my workflow can be turned into a webapp front end like this:*

*I attached my n8n workflow.*

*Please analyze this workflow and tell me:*

- 1. Can you build a frontend for this workflow?*
- 2. What inputs does the workflow need?*
- 3. What outputs does it return?*
- 4. What webhook changes do I need to make in n8n? Where do I need to add them?*
- 5. What would the app look like?*

*Once you've analyzed it, please build the frontend. The app should:*

- Accept the inputs this workflow needs*
- Send data to my n8n webhook*
- Display the response from n8n*
- Be mobile-friendly*
- Have a clean, simple UI*

*My n8n webhook URL is: [I'LL GIVE YOU THIS LATER]*

*Start by analyzing the workflow and telling me your plan.*

Then you paste the result into Antigravity.

Alternatively you can describe your workflow yourself in this prompt:

### **Initial Prompt Template:**

*"I have an n8n workflow that I want to turn into a web app.*

*MY N8N WORKFLOW:*

- Accepts: [describe inputs - text, files, images, etc.]*
- Processes: [describe what n8n does]*
- Stores data in: [Google Sheets/database/etc.]*
- Returns: [describe the JSON output structure]*

**WHAT I NEED IN THE WEB APP:**

- *Input: [forms, file upload, etc.]*
- *Display: [list, dashboard, charts, etc.]*
- *Features: [filters, search, edit/delete, etc.]*
- *Design: [modern, minimal, dark mode, etc.]*
- *Device: [mobile-first, desktop, responsive]"*
