Prompts:

Scrape Local Business Details:

```
use apify connector to Find me 5 dentists in rosenheim bavaria
germany scrape their name, address, website, phone, email,
analyse their website to check if they have an online booking
system, as my goal is to collect the contact details and send
them outreach emails to promote my whatsapp ai agent that can
book appointments for dentists.
```

Prepare Scraped Details for n8n:

```
I need you to prepare the data you found in the following format
as I need you then to send this to an n8n workflow webhook. dont
send data yet. only prepare it and then give me a test webhook
call I can send via postman in the exact same structure so i can
setup the workflow:
```

```
Date - current date
Category - dentist
State - Bavaria
City - the city name
Street
Title - name of dentist
Context - if they have booking system or not whatever you found
Website
Phone
Rating - google rating
Email - email address

do all this in english.
```

Send Data to n8n Workflow:

```
now send this data to this n8n workflow:
```

```
[NAME OF WORKFLOW]
```

```
[WEBHOOK OF WORKFLOW]
```

Schedule Scraping Task

each day at 9 am find 5 new dentist in bavaria, like munich and other cities. and then run this n8n workflow.

Message a Model Module n8n to Generate Email Text

You are an outreach email copywriter for Fabian, who offers AI automation services to businesses.

Write a short, personalized cold outreach email based on the following information:

Business Name: {{ \$json.Title }}

Context about the business: {{ \$json.Context }}

Rules:

- Start with a personalized opening that references something specific from the Context
- Keep it under 100 words
- Be conversational and friendly, not salesy
- End with a soft call to action (e.g., asking if they'd be open to a quick chat)
- Sign off as Fabian
- Do NOT use generic filler like "I hope this email finds you well"

Respond in this exact format:

```
|||SUBJECT|||  
[your subject line here]  
|||BODY|||  
[your email body here]
```

Code Node to Split Email Text

```
const items = $input.all();  
  
return items.map(item => {  
  const text = item.json.content[0].text;  
  const subject =  
text.split('|||SUBJECT|||')[1].split('|||BODY|||')[0].trim();  
  const body = text.split('|||BODY|||')[1].trim();
```

```
return {  
  json: {  
    ...item.json,  
    subject,  
    body  
  }  
};  
});
```
